# ALK2 (ACVR1) Kinase Assay Kit

# Description

The ALK2 (ACVR1) Kinase Assay Kit is designed to measure ALK2 (activin receptor-like kinase-2) kinase activity for screening and profiling applications using ADP-Glo<sup>™</sup> as a detection reagent. The assay kit comes in a convenient 96-well format, with enough purified recombinant ALK2 (amino acids 147-509), casein, ATP, and kinase assay buffer for 100 enzyme reactions.

# Background

ALK2 (activin receptor-like kinase-2), also known as ACVR1 (activin A receptor, type 1) is a protein of the BMP (bone morphogenetic protein) and TGF $\beta$  (transforming growth factor beta) family, and is a type I receptor. Activin signaling occurs by binding activin to heteromeric complexes of receptor type I and type II, with receptor type I being responsible for signaling and type II for ligand binding. SMAD1 (mothers against decapentaplegic homolog 1)/2/3/6 are activated by ALK2. This protein is involved in the development of several organs, such as heart, nervous system, and bone. Dysfunction of ALK2 can result in a set of rare diseases, namely fibrodysplasia ossificans progressive (FOP). ALK2 is also linked to DIPG (diffuse intrinsic pontine glioma). The development of ALK2 inhibitors has been hindered by the close similarity in the kinase domain of the 7 known ALK, with particular attention needed on inhibition of ALK5, which can result in cardiac toxicity. Clinical trials are ongoing and will pave the way for further studies using ALK2-specific inhibitors.

#### Applications

Study enzyme kinetics and screen small molecule inhibitors for drug discovery and high throughput screening (HTS) applications.

Catalog #	Name	Amount	Storage
40019	ALK2 (ACVR1), GST-Tag	10 µg	-80°C
79334	5x Kinase Buffer 1	1.5 ml	-20°C
79686	500 μΜ ΑΤΡ	100 μl	-20°C
79550	Casein (5 mg/ml)	100 μl	-20°C
79696	White 96-well plate	1	Room Temperature

#### **Supplied Materials**

\*The concentration of the protein is lot-specific and will be indicated on the tube.

## **Materials Required but Not Supplied**

Name	Ordering Information
ADP-Glo™ Kinase Assay	Promega #V6930
DTT (Dithiothreitol), 1M, optional	
Microplate reader capable of reading luminescence	
Adjustable micropipettor and sterile tips	
30°C incubator	

## **Storage Conditions**

This assay kit will perform optimally for up to **6 months** from date of receipt when the materials are stored as directed.

#### Safety

This product is for research purposes only and not for human or therapeutic use. This product should be considered hazardous and is harmful by inhalation, in contact with skin, eyes, clothing, and if swallowed. If contact occurs, wash thoroughly.

#### **Assay Principle**

The **ADP-Glo<sup>™</sup> Kinase Assay (Promega #V6930)** quantifies the amount of ADP produced by a kinase upon phosphorylation of a substrate. First, addition of the ADP-Glo<sup>™</sup> reagent terminates the reaction and quenches the remaining ATP. Second, the addition of the Kinase Detection reagent converts the produced ADP to ATP. The newly generated ATP is quantified by a luciferase reaction. The luminescent signal correlates with the amount of ADP generated by the kinase and is linear to 1 mM ATP.

#### Contraindications

The final concentration of DMSO in the assay should not exceed 1%.

#### **Assay Protocol**

- All samples and controls should be tested in duplicate.
- The assay should include "Blank", "Positive Control" and "Test Inhibitor" conditions.
- We recommend maintaining the diluted protein on ice during use.
- For detailed information on protein handling please refer to Protein FAQs (bpsbioscience.com).
- We recommend using LDN-212854 as internal control. If not running a dose response curve for the control inhibitor, we recommend running the control inhibitor at 0.1X, 1X and 10X the IC<sub>50</sub> value shown in the validation data below.
- 1. Thaw **5x Kinase Assay Buffer 1**, **500** µM ATP, and **casein (5 mg/ml)**.

Optional: If desired, make **5x Kinase Assay Buffer 1** with 10 mM DTT.

2. Prepare 3 ml of **1x Kinase Assay Buffer 1** by mixing 600 μl of **5x Kinase Assay Buffer 1** with 2,400 μl of distilled water.

Note: Three (3 ml) of 1x Kinase Assay Buffer 1 is sufficient for 100 reactions.

- 3. Prepare a **Master Mix** (12.5 μl/well): N wells x (3 μl of 5x Kinase Assay Buffer 1 + 0.5 μl of 500 μM ATP + 1 μl of casein (5 mg/ml) + 8 μl of distilled water).
- 4. Add 12.5 µl of Master Mix to every well.
- 5. Prepare the **Test Inhibitor** (2.5  $\mu$ l/well): for a titration prepare serial dilutions at concentrations 10-fold higher than the desired final concentrations. The final volume of the reaction is 25  $\mu$ l.

5.1 If the Test Inhibitor is water-soluble: Prepare serial dilutions in 1x Kinase Assay Buffer 1, 10-fold more concentrated than the desired final concentrations.

For the positive and negative controls, use 1x Kinase Assay Buffer 1 (Diluent Solution).

2

OR

5.2 If the Test inhibitor is soluble in DMSO: Prepare the test inhibitor at 100-fold the highest desired concentration in 100% DMSO, then dilute the inhibitor 10-fold in 1x Kinase Assay Buffer 1 to prepare the highest concentration of the 10-fold intermediate dilutions. The concentration of DMSO is now 10%.

Prepare serial dilutions of the Test Inhibitor at 10-fold the desired final concentrations using 10% DMSO in 1x Kinase Assay Buffer 1 to keep the concentration of DMSO constant.

For positive and negative controls, prepare 10% DMSO in 1x Kinase Assay Buffer 1 (vol/vol) so that all wells contain the same amount of DMSO (Diluent Solution).

Note: The final concentration of DMSO should not exceed 1%.

- 6. Add 2.5  $\mu$ l of Test Inhibitor to each well labeled "Test Inhibitor".
- 7. Add 2.5  $\mu$ l of Diluent Solution to the "Positive Control" and "Blank" wells.
- 8. Add 10  $\mu$ l of 1x Kinase Assay Buffer 1 to the "Blank" wells.
- 9. Thaw ALK2 Kinase on ice. Briefly spin the tube to recover its full content.
- 10. Dilute the protein kinase (10  $\mu$ l/well) to 5 ng/ $\mu$ l with **1x Kinase Assay Buffer 1**.
- 11. Initiate the reaction by adding 10  $\mu l$  of diluted kinase to the wells designated "Positive Control" and "Test Inhibitor".

Component	Blank	<b>Positive Control</b>	Test Inhibitor	
Master Mix	12.5 μl	12.5 μl	12.5 μl	
Test Inhibitor	-	-	2.5 μl	
Diluent Solution	2.5 μl	2.5 μl	-	
1x Kinase Assay Buffer 1	10 µl	-	-	
Diluted ALK2 (5 ng/µl)	-	10 µl	10 µl	
Total	25 μl	25 μl	25 μl	

- 12. Incubate at 30°C for 45 minutes.
- 13. Thaw the ADP-Glo<sup>™</sup> reagent.
- 14. At the end of the 45-minute reaction, add 25 µl of ADP-Glo<sup>™</sup> reagent to each well.
- 15. Cover the plate with aluminum foil and incubate at Room Temperature (RT) for 45 minutes.
- 16. Thaw the Kinase Detection Reagent.

- 17. Add 50  $\mu$ l of Kinase Detection reagent to each well.
- 18. Cover the plate with aluminum foil and incubate at RT for another 45 minutes.
- 19. Immediately read in a luminometer or a microplate reader capable of reading luminescence.
- 20. The "Blank" value is subtracted from all other readings.

#### **Reading Luminescence**

Luminescence is the emission of light resulting from a chemical reaction. The detection of luminescence requires no wavelength selection because the method used is emission photometry and not emission spectrophotometry.

To properly read luminescence, make sure the plate reader is set for LUMINESCENCE mode. Typical integration time is 1 second, delay after plate movement is 100 msec. Do not use a filter when measuring light emission. Typical settings for the Synergy 2 BioTek plate reader: use the "hole" position on the filter wheel; Optics position: Top; Read type: endpoint. Sensitivity may be adjusted based on the luminescence of a control assay without enzyme (typically we set this value as 100).

**ALK2** Activity

#### **Example Results**

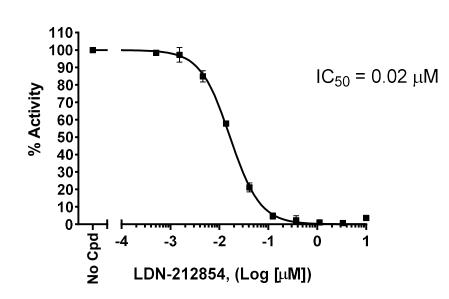

Figure 1: Inhibition of ALK2 kinase activity by LDN-212854.

ALK2 kinase activity was measured in the presence of increasing concentrations of LDN-212854. The "Blank" value was subtracted from all other values. Results are expressed as the percent of control (kinase activity in the absence of inhibitor, set at 100%).

Data shown is representative. For lot-specific information, please contact BPS Bioscience, Inc. at support@bpsbioscience.com.
