Data Sheet

3CL Protease, MBP-tagged (SARS-CoV-2) Assay Kit

Catalog #79955-2
Size: 384 reactions

Datasheet updated December 2021

BACKGROUND: Coronaviruses (CoVs) cause respiratory and intestinal infections in humans and animals. The 3CL protease, also known as Main Protease (Mpro), plays a vital role in processing the polyproteins that are translated from the viral RNA. Protease inhibitors that can block viral replication are promising potential drug candidates for the treatment of patients suffering from COVID-19 infection.

DESCRIPTION: The *3CL Protease Assay Kit* is designed to measure 3CL Protease activity for screening and profiling applications, in a homogeneous assay with no time-consuming washing steps. The kit comes in a convenient 96-well format, with purified 3CL Protease MBP-tag (BPS Bioscience, #100707), fluorogenic substrate, and 3CL Protease assay buffer for 400 enzyme reactions. 3CL inhibitor GC376 is also included as control.

The 3CL Protease Substrate is an internally quenched 14-mer fluorogenic peptide (DABCYL-KTSAVLQSGFRKME-EDANS). When the donor (EDANS) and acceptor (DABCYL) fluorophores are in close proximity, the energy emitted from EDANS is quenched by DABCYL (intact substrate). Upon proteolysis by 3CL, the peptide substrate is cleaved between glutamine and serine by the 3CL protease to generate the highly fluorescent peptide fragment (SGFRKME-EDANS). The fluorescence intensity increases proportionally to the activity of 3CL. More information on the substrate, including MW and structure, can be found on our website (BPS Bioscience, #79952).

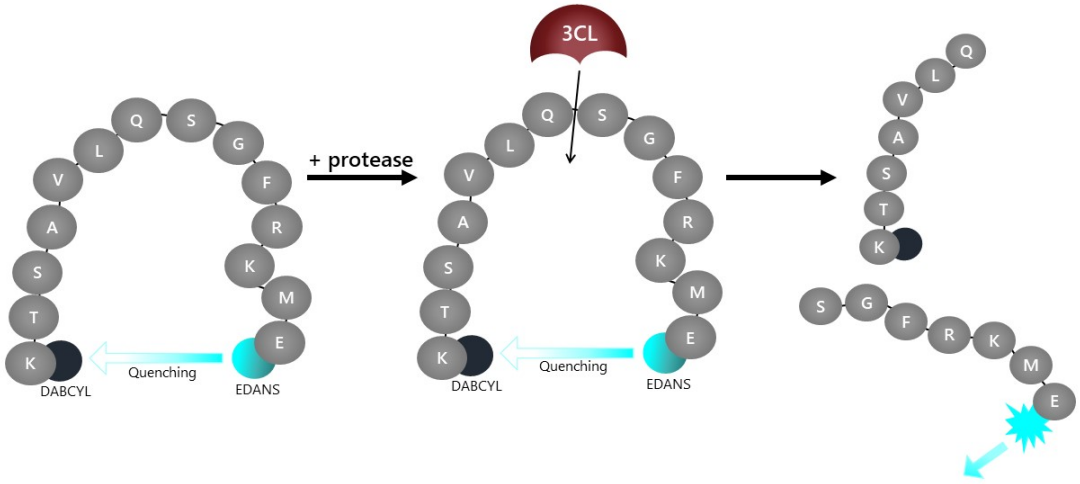

Figure 1: Illustration of the principle behind the 3CL protease assay. The 3CL Protease Substrate is an internally quenched 14-mer fluorogenic peptide (DABCYL-KTSAVLQSGFRKME-EDANS). When the donor (EDANS) and acceptor (DABCYL) fluorophores are in close proximity the energy emitted from EDANS is quenched by DABCYL (intact substrate). Upon proteolysis by 3CL, the peptide substrate is cleaved between the glutamine and serine residues to generate the highly fluorescent peptide fragment (SGFRKME-EDANS). The fluorescence intensity increases proportionally to the activity of 3CL More information on the substrate, including MW and structure, can be found on our website (BPS Bioscience #79952).

COMPONENTS:

Catalog #	Component	Amount	Storage	
100707	Recombinant 3CL Protease, MBP-tag*	60 µg	-80°C	***Avoid freeze/ thaw cycles!***
79952-1	3CL Protease Substrate (10 mM)	50 µl	-80°C	
79956	3CL Protease Assay Buffer	25 ml	-20°C	
78013	GC376, MW=507.5	50 µg	-20°C	
	0.5 M DTT	200 µl	-20°C	
79961	384-well black, low binding microtiter plate	1	Room Temperature	
	Plate sealing film			

**The exact concentration of protein is lot-specific and will be indicated on the tube containing the protein.*

3CL inhibitor GC376 is provided as a technical control for 3CL inhibition. More information on GC376, including MW and molecular structure, can be found on our website (BPS Bioscience, #78013).

MATERIALS OR INSTRUMENTS REQUIRED BUT NOT SUPPLIED:
Fluorescent microplate reader capable of reading exc/em=360 nm/460 nm

APPLICATIONS: Great for identifying inhibitors of 3CL protease activity in HTS applications.

STABILITY: At least one year from date of receipt when stored as directed.

ASSAY PROTOCOL:
All samples and controls should be tested in duplicate.

1) Just before use, dilute **0.5 M DTT** 500 times into the **3CL Protease Assay Buffer** to obtain a DTT concentration of 1 mM. For example, add 10 µl of **0.5 M DTT** to 5 ml of assay buffer. Prepare enough DTT-containing buffer as required for the assay. Store the remaining assay buffer at -20°C.
2) Thaw the **3CL Protease** on ice. Briefly spin the tube containing the enzyme to recover the full content of the tube. The kit provides enough enzyme for one plate. Note: **3CL Protease** is sensitive to freeze/thaw cycles. Do not re-use the diluted enzyme.
3) Dilute **3CL Protease** in **Assay buffer** (containing 1 mM DTT) at 10 ng/µl (150 ng per reaction).

   Note: The exact concentration and volume of enzyme is lot-specific and will be indicated on the tube. Calculate required dilution from the information in the tube. It may be desirable to dilute the enzyme serially to avoid using large amounts of protease assay buffer for the dilution.
4) Add 15 µl of **diluted 3CL Protease** to the wells designated as “Positive Control”, “Inhibitor Control” (i.e. GC376) and “Test Inhibitor”. Add 15 µl of **Assay buffer** (containing 1 mM DTT) to the “Blank” wells.

San Diego CA 92121
Tel: 1.858.202.1401
Fax: 1.858.481.8694
Email: support@bpsbioscience.com

5) Dilute 50 µg **GC376** in 400 µl **Assay buffer** (with DTT) to obtain a 250 µM solution. Add 5 µl of **GC376** (250 µM) to the wells labeled "Inhibitor Control". Aliquot and store remaining solution in aliquots at -80°C.

6) Prepare the Test Inhibitor.

   The final concentration of DMSO in the assay should not exceed 1%. If the Test Inhibitor is dissolved in DMSO, make a 100-fold higher concentration of the compound than the highest desired concentration. Then make a 20-fold dilution in 1x **Assay Buffer** (containing DTT). At this step the compound concentration is 5-fold higher than the final concentration.

   If the test inhibitor is dissolved in water, make a 5-fold higher concentration of the test compound than the final desired concentration in the **Assay buffer** (containing DTT).

   Add 10 µl of Test Inhibitor to each well designated "Test Inhibitor".

7) Diluent Solution (no inhibitor): add 5 µl of assay buffer (if the test compound is water soluble and was diluted in assay buffer) or 5 µl of 5% DMSO diluted in assay buffer (if DMSO was used to dissolve the test inhibitor) to "Blank" and "Positive Control" wells.

Component	Positive Control	Test Inhibitor	Inhibitor Control	Blank
3CL Protease (10 ng/µl)	15 µl	15 µl	15 µl	–
Assay Buffer (with DTT)	–	–	–	15 µl
GC376 (250 µM)	–	–	5 µl	–
Test Inhibitor	–	5 µl	–	–
Diluent Solution (no inhibitor)	5 µl	–	–	5 µl
Total	**20 µl**	**20 µl**	**20 µl**	**20 µl**

8) Preincubate for 30 min at room temperature with slow shaking.

9) Dilute the 50 µl of **3CL Protease substrate** (10 mM) in 2 ml **Assay buffer** containing DTT, to make a 250 µM solution. The final concentration of the **3CL Protease substrate** in a 25 µl reaction is 50 µM.

10) Start the reaction by adding 5 µl of the substrate solution to all the wells, including the "Blank". This brings the final reaction volume to 25 µl.

    Seal the plate with the plate sealer and incubate at room temperature for 4 hours.

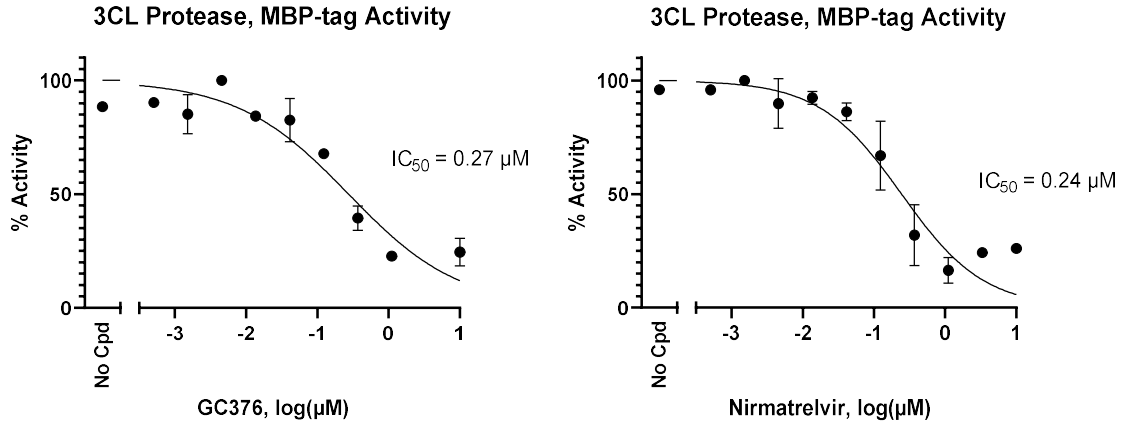
11) Measure the fluorescence intensity in a microtiter plate-reading fluorimeter capable of excitation at a wavelength 360 nm and detection of emission at a wavelength 460 nm. The fluorescence intensity can also be measured kinetically. The "Blank" value is subtracted from all other values.

EXAMPLE OF ASSAY RESULTS:



Inhibition of 3CL Protease, MBP-tagged enzyme activity by increasing concentrations of GC376 (left) or Nirmatrelvir (right), measured using the *Fluorogenic 3CL Protease, MBP-tagged Assay Kit (BPS Bioscience #79955-2).* Fluorescence intensity was measured using a Tecan fluorescent microplate reader. Results are expressed as percent of activity relative to the no-inhibitor control (set at 100%).

Data shown is representative. For lot-specific information, please contact BPS Bioscience, Inc. at support@bpsbioscience.com
